

PROJECT DESCRIPTION

As being a student, we know that we face many difficulties to make notes of the chapters or articles, as usually we make a note on hard copy by writing or by drawing all the thing that consume time or we should copy and paste the content one by one to another file in system which also take time + creates confusing leading us to lose focus from topic.

so, we designed a Software name: "Note It Up" which is able to make notes by just selecting the text all over the window anywhere.

It allows users to effortlessly capture and organize text from websites, PDFs, and other digital sources directly into Docx file without the need to switch between applications.

Here's a condensed one-line version of the features:

- **Automatic Text Pasting:** Captures and pastes text directly into Word or Google Docs.
- **Heading and Subheading Insertion:** Organizes content into structured headings or bullet points.
- **AI-Based Summarization:** Summarizes lengthy texts into concise notes.
- **In-Built Dictionary:** Provides meanings, synonyms, antonyms, and spell check.
- **Image Addition:** Enables image insertion for enhanced visual content.
- **Instant Undo and Redo:** Allows immediate undo and redo actions.
- **Quick Navigation & User-Friendly Interface:** Easy-to-use interface for smooth note management.
- **Instant View of Notes:** Quick access to saved notes for viewing or editing.

We also integrate some more ai features like Translator, and also on working with new addon : **an AI chatbot** which helps the students to understand the topics, solving doubts, making sample questions, practice Tests (mcq) , etc which helps student to study fast and learn the concepts by practicing with our AI...

Main: These features are optimized for both online and offline use where applicable (but need to be online while using ai features).
